

PURPOSE OF PRODUCT

Mammoth Myco contains four species of carefully-curated beneficial arbuscular mycorrhizal inoculants and two species of plant growth-promoting rhizobacteria. Use as an amendment to your hydroponic system, soil, or other growing media.

When applied near the root system of a plant, mycorrhizal fungi and rhizobacteria colonize roots and extend into the surrounding soil, forming a significant link between plant and soil resources. These microbes aid in improved root development and proliferation, enhanced nutrient uptake, and an increase in overall plant mass.
