## STARTER PLUGS

50 DEEP PLUG KIT

## INSTRUCTIONS

Insert seed or cutting into predrilled hole.

### FOR CUTTINGS

- 1. Insert your cutting into the predrilled hole at the top of your Starter Plug.**  
Do not plant your cutting too deep as to provide the most media for root development.
- 2. Mist your cuttings and place under a plastic dome or in a controlled environment.**  
Be sure to maintain consistent humidity with an optimal range between 70-75%.
- 3. Monitor the moisture in your Starter Plug.**  
You will want your plug to remain damp but not soaking. Your Starter Plug will not retain any more water than needed for root development.
- 4. Once you have visible root growth, you may transplant.**

### FOR SEEDS

- 1. Place your seed into the predrilled hole at the top of your Starter Plug.**  
Do not plant your seed too deep as to provide the most media for root development.
- 2. Keep your trays in a warm, dark place to optimize your germination rate.**  
Be sure to avoid temperatures of 90°F/32°C or above to prevent seed dormancy.
- 3. Monitor the moisture in your Starter Plug.**  
You will want your plug to remain damp but not soaking. Your Starter Plug will not retain any more water than needed for root development.
- 4. Once you have visible root growth, you may transplant.**

NOTE: This product does not include fertilizer. Add fertilizer as needed. You may notice trace mold growth on the plugs. This is harmless to your plants. It results from moisture and ingredients.
